Technical Skills

Languages: Golang, Python, SQL
Frameworks & Libraries: Gin, Fiber, GORM
Databases & Caching: PostgreSQL, MongoDB, MS SQL Server, DynamoDB, Redis
Messaging & Streaming: Apache Kafka, AWS SQS
Architecture & APIs: Microservices, Event-Driven, gRPC, Protobuf, RESTful APIs, WebSockets
Cloud & Infra: AWS, Docker, Kubernetes, HashiCorp Vault
DevOps & Tools: Jenkins, JFrog, Git, CI/CD Pipelines
Observability & Testing: OpenTelemetry, Dynatrace, Testify, Mockery

Experience

Senior Backend Engineer - Golang March 2025 – Present
Axis Direct *Title: Manager M3*

- Overhauled the Security Master platform architecture, slashing API latency by **60%** for high-scale traffic, by engineering cron-driven **DynamoDB** caching and rewriting **25+ Golang** microservices.
- Optimized the options chain data retrieval logic, reducing peak response times from **5s** to under **100ms** for thousands of concurrent requests, by introducing a dynamic, highly available **Redis** caching layer.
- Accelerated complex system debugging and incident resolution, drastically reducing MTTR, by integrating comprehensive observability and distributed tracing using **OpenTelemetry** and **Dynatrace** across the **Go** backend.
- Delivered a scalable multi-portfolio developer platform, enabling seamless user toggling with drastically reduced latency, by optimizing **SQL** Stored Procedures and building robust cache mechanics.
- Elevated overall system reliability to **99.99%** uptime, accelerating QA lifecycles, by leading architectural design reviews, enforcing rigorous code review standards for **4** engineers, and implementing **Docker** containerization.
- Minimized technical debt and lowered server infrastructure costs, successfully decommissioning redundant processes, by engineering central developer platforms and reusable **Golang** libraries utilized across multiple teams.

Software Development Engineer 1 June 2022 – Feb 2025
Wiz Freight *Chennai*

- Optimized an **AWS**-deployed task management system, reducing manual intervention by **30%**, by developing robust **RESTful** and **gRPC** APIs in **Golang** utilizing a bounded worker pool pattern.
- Enhanced logistics algorithms and ERD workflows, reducing system navigation time by **40%** and transportation costs by **25%**, by building real-time **WebSocket** integrations using **Go**.

Software Developer Intern Jan 2022 – Apr 2022
NGP Websmart Pvt. Ltd

- Streamlined routine operational workflows, driving a **15%** improvement in team productivity, by engineering custom automation scripts in **Python**.

Awards

Best Debutant Award | *Axcellence 2026, Axis Direct* July 2026

- Awarded for outstanding platform impact as a recently onboarded Senior Engineer, driving rapid architectural improvements and stability through high-quality **Golang** backend delivery.

Open Source Contributions

QuickFIX/Go (FIX protocol engine) | *github.com/quickfixgo/quickfix/pull/787* Oct 2026 – *PR open*

- Cut `FIXDecimal.Write` (price/quantity encoding on every outgoing order) from **155 ns to 20.5 ns** and **11 to 2 allocations per call** by formatting from the int64 coefficient instead of `big.Int`, with a safe fallback.
- Proved output identical via a differential test (`MinInt64`, rounding ties, overflow); `benchstat` over 10 runs; issue #786.

Supabase Auth | *github.com/supabase/auth/pull/2878* Oct 2026 – *PR open*

- Hardened third-party OAuth 2.1 flows with route middleware and defense-in-depth handler checks in **Go**, so OAuth client access tokens cannot modify credentials or account state.
- Added strict scope limiting for user-profile retrieval, covered by unit tests.
